Triacs BT138X series

### **GENERAL DESCRIPTION**

# Glass passivated triacs in a full pack plastic envelope, intended for use in applications requiring high bidirectional transient and blocking voltage capability and high thermal cycling performance. Typical applications include motor control, industrial and domestic lighting, heating and static switching.

#### **DEFINITIONS**

| Data sheet status         |   |  |  |  |  |  |  |
|---------------------------|---|--|--|--|--|--|--|
| Objective specification   | This data sheet contains target or goal specifications for product development.       |  |  |  |  |  |  |
| Preliminary specification | This data sheet contains preliminary data; supplementary data may be published later. |  |  |  |  |  |  |
| Product specification     | This data sheet contains final product specifications.                                |  |  |  |  |  |  |
|                           | •   |  |  |  |  |  |  |

#### Limiting values

Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

#### **Application information**

Where application information is given, it is advisory and does not form part of the specification.
